The BRITE Study

Brain Response and Infant & Toddler Emotions

Are you the birth mother of a 1, 2, or 3 year old child?

You and your child may be eligible to participate in a research study with the

University of Pittsburgh Medical Center

on how very young children respond to rewarding activities and mother-child play.

Participation will involve 6 or 7 laboratory visits over three years.

You and your child will complete interactive tasks and play games together while wearing a head cap that measures brain response.

You will be asked to complete interviews and questionnaires.

Compensation will be provided.

CARE

Child Affect Regulation and Expression

Laboratory of Child Development

If you are interested in participating, please call the CARE lab at (412) 383-1047 to set up a visit.
